

## Order Picker Forklift Parts

Order Picker Forklift Part - Order preparation operation or likewise called order picking as it is more usually known is a method utilized within warehouse operations and consists of employees known as order pickers. The order picker's task is to take and collect articles in certain quantities in order to fulfill the customer's orders prior to shipment. Order picking is an easy warehousing process. The effectiveness in which this job is completed can be directly related to the productivity of a supply chain. Hence, order picking is among the most controlled logistic processes. Order picking falls within the category of the warehouse management system.

There are several specific types of order picking. The main kinds include: wave picking method, pick to box method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method comprises the order picker filling the box with the stuff from his or her station. The box then moves to other picking locations until the client order is complete. In this particular method, there is no movement of the order picker staff. In the wave picking method, the order pickers move all-around to be able to collect the necessary things for several orders. The picker to part method or piece picking is similar where the order picker or pickers move to gather the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, things are delivered to the orderpicker by an automatic system like for instance an automatic storage system or a conveyor system. In the zone picking method, each and every order picker is assigned to one specific area. They are responsible for just realizing order picking in this specified zone.
